

Tools

- WATIR – Web Application Testing in Ruby: Allows us to interact with browsers. Mostly use it indirectly
- Rspec – Framework for writing unit tests and a validation library
- Cucumber – Framework for writing executable requirements, i.e. it ties the tests and requirements together
- Page-object – Library that allows us to separate page structure from page content (emphasis on allows, we still have to make good decisions)
- RubyMine – Application that allows us to organize files, edit files, and run tests (i.e. an IDE)
- Ruby – Programming language we'll use to write the tests
